

## Putting your heart into it!

Larry started out with an ordinary morning. But as the morning progressed, he began to feel like something was wrong. He and his wife decided that he needed to go to the TCRH Emergency Department. Larry was treated immediately for his symptoms in the ED. **Larry was having a heart attack.** Larry received a clot busting medication and was transferred to a higher level of care for further treatment and a heart catheterization. Larry's clot busting medication had saved his heart from permanent damage. Larry is now participating in TCRH Cardiac Rehab program where he is making heart healthy lifestyle changes and progressing with exercise to improve his quality of life.

*"I had no idea that was what a heart attack should feel like. I'm so thankful we went to the TCRH ER. I have lost 10 pounds through the cardiac rehab program and feel inspired to exercise on my own in addition to my sessions."*
